

Texas Division of Emergency Management State Situation Report

Event Name	26-0016 New World Screwworm Response
Date	September 5, 2026
Time	4:00 PM
Reporting Period	2:00 PM September 4, 2026, to 2:00 PM September 5, 2026
Report Number	91

TDEM Regions Affected	5, 6, 7
Disaster Districts Activated	N/A

STATEWIDE CURRENT SITUATION: The Texas Disaster Portal continues to be updated regularly with the latest guidance, resources, and information from state agencies engaged in the response to New World Screwworm. The one-stop-shop portal, located on the Texas Division of Emergency Management website, can be accessed online at screwworm.texas.gov.

The Texas Animal Health Commission (TAHC) continues coordinated NWS response efforts through animal inspections, movement certification, surveillance, treatment, checkpoint operations, market screening, laboratory identification, producer outreach, and public education. Recent epidemiological assessments have supported the [release](#) and modification of areas included in infested zones while remaining infested zones continue under quarantine and movement restrictions as investigations and surveillance proceed.

On August 31, Texas Animal Health Commission (TAHC) [released](#) the first eligible Infested Zones. Designated areas of Gillespie, Kerr, La Salle, and Webb Counties were released, marking a significant milestone in Texas' ongoing NWS response.

Texas Parks and Wildlife (TPWD) continues coordinated statewide surveillance and response efforts to prevent, detect, control, and eradicate parasitic disease in the Texas-Mexico Border region. Staff are engaging landowners, partners, and stakeholders, inspecting wildlife, monitoring game cameras, supporting federal and

state agencies, conducting outreach and training, and securing locations for traps and surveillance equipment.

The Texas A&M AgriLife Extension Service continues coordinated NWS preparedness, response, education, and outreach through statewide monitoring, specialist collaboration, public information efforts, training, educational resources, detection support, and research. Response personnel remain prepared to assist local agents and partners, while ongoing research and professional training strengthen detection, control, animal health, and recovery capabilities.

The Texas Department of State Health Services (DSHS) remains at increased readiness, coordinating with state partners to support the NWS response and protect livestock and wildlife. Field inspectors and regional staff continue supporting response activities, partner outreach, preparedness exercises, and dissemination of current guidance. DSHS remains prepared to respond to potential human cases and provide additional support as needed.

On June 19, Governor Greg Abbott announced the launch of an enhanced website that offers comprehensive information for Texans related to the New World Screwworm (NWS). Located in TDEM's Disaster Portal, Texans can visit screwworm.texas.gov to access a "one-stop shop" of information and resources from state agency partners engaged in NWS response.

State agencies are working closely with local, state, and federal partners in the field and at the State Emergency Operations Center. State partners have contacted thousands of landowners and stakeholders and remain engaged and prepared to support response operations as efforts continue to prevent further spread of NWS.

On June 8, Governor Abbott directed TDEM to activate the Texas State Emergency Operations Center to Level II (Escalated Response) to support the state's New World Screwworm response operations.

Resources from multiple state agency partners and the U.S. Department of Agriculture (USDA) are being leveraged in response to this parasite detection.

On June 5, following confirmation of NWS detection in Texas, Gov. Abbott received a briefing and provided an update to Texans on the state's response at the Texas State Emergency Operations Center. The Governor also issued an updated state disaster declaration to address NWS and prioritize operations in Uvalde and Zavala counties.

On January 26, Gov. Abbott issued a statewide disaster declaration certifying that the spread of NWS threatened Texas's livestock industry and economy and posed an imminent threat of widespread and severe property damage for all Texas counties. The declaration also authorized the use of all available resources of the state government to cope with this disaster and allowed for the allocation of state resources to address the spread of the parasite to the Texas NWS response team.

On June 25, 2025, Gov. Abbott directed the Texas Animal Health Commission and Texas Parks and Wildlife Department to establish a joint Texas New World Screwworm Response Team to lead the state's prevention and response efforts.

For more than 18 months since being informed of a positive case of NWS in Mexico, the USDA has been working to combat the impacts in coordination with state and local partners. Such measures by the USDA include importing and dispersing sterile flies in South Texas, outreach with local producers, and building a facility to assist with sterile fly operations.

The Texas Emergency Management Council continues to monitor developments.

OPERATIONAL PRIORITIES:

- Protect life and property.
- Support rapid & effective response.
- Collect and disseminate accurate incident information to improve decision-making.
- Accurately track incident costs associated with assigned resources for cost recovery.

RESPONDING STATE AGENCIES/ORGANIZATIONS REPORTS

Texas Division of Emergency Management (TDEM):

On June 8, the State Operations Center (SOC) activated to Level II (Escalated Response) in support of the New World Screwworm incident. The SOC continues directing interagency coordination to maintain unified communication, deploy necessary resources, and support response operations in affected regions across Texas.

TDEM Regional staff continue to remain engaged with local officials across impacted areas as well as areas that have not experienced cases.

Coordination between local, state, federal, industry, and private-sector partners remains ongoing.

Texas Animal Health Commission (TAHC):

NWS Statistics

As of [9/5/26](#) at 2:00 pm:

Total Confirmed Cases in Texas: 47

Counties affected	Total positive cases	Species affected
Crockett	1	canine
Val Verde	2	Sheep, goat

Counties affected	Total inactive cases	Species affected
Zavala	3	cattle
Sutton	3	sheep, canine, goat
La Salle	2	cattle
Gillespie	1	goats
Pecos	4	canine, sheep
Crockett	11	sheep, cattle, goats
Edwards	5	cattle, goats, sheep
Tom Green	1	cattle
Terrell	5	cattle, goats, sheep
Medina	1	cattle
Jim Hogg	1	cattle
Schleicher	1	sheep
Uvalde	1	cattle
Brewster	4	cattle
Starr	1	cattle

NWS Certified Inspector Program Statistics

As of 9/5/26 at 2:00 PM

Application in Process	2
Certified Inspectors	859

**TAHC expanded eligible applicants to include emergency management personnel. As the program rolls out, TAHC is evaluating expansion of the program to additional groups*

Mission Information and Details

- To date, TAHC has inspected 61,757 animals in the infested zones (IZ), and 2,206 certificates have been issued for movement out of the infested zones.
- TAHC inspectors have been mobilized to conduct animal inspection/movement/outreach within the identified infested and adjacent zones. These groups will conduct inspections of livestock to identify myiasis, assist producers with topical/systemic treatments, and collect larval samples for official laboratory identification. Additionally, they will perform pre-movement

inspections, ensure proper treatment compliance, and issue official NWS movement certificates as quickly as possible.

- On [September 4](#), a total of [18](#) inspections were completed on [160](#) animals moving out of the infested zones.
- TAHC compliance and checkpoint strike teams are operating roadside checkpoints. Roadside checkpoints have been established within the infested and adjacent zones to ensure NWS guideline compliance. Compliance teams are shifting operational focus to direct educational outreach and engagement with producers and stakeholders throughout the infested and surveillance zones and expand movement beyond operating checkpoints.
- Livestock Market inspections are being conducted to screen livestock for signs of myiasis and verify that all animals entering a market from an Infested Zone possess a valid NWS movement certificate. Animals moving to slaughter are monitored to ensure they enter proper slaughter channels, and any changes to a non-slaughter status are confirmed to receive immediate treatment at the market.
- TAHC Regional Staff are working with local producers in the region to answer questions and assist with the coordination of local jurisdictions and assets.
- NWS Identification Specialists, located at the NVSL Mobile Lab and USDA Agricultural Research Service (ARS) Lab, are screening suspect larval and fly submissions from the infested and adjacent zones for rapid identification. One (1) TAHC entomologist has been assigned to the mobile laboratory to assist.
- Providing information, outreach, and education to industry, animal owners, stakeholders, and the public about NWS to encourage surveillance and proper reporting.
- The [TAHC New World screwworm webpage](#) is updated regularly to provide information and resources, as it becomes available.
- Field personnel are equipped with outreach materials for distribution during response activities.
- In collaboration with Texas A&M AgriLife Extension Service, TAHC is providing animal owners and producers, veterinarians, NWS Certified Inspectors, and other stakeholders with a quick-reference resource outlining current animal movement requirements related to NWS. This platform contains content to facilitate TAHC-compliant animal movement and is designed to simplify the identification of the correct movement requirements for various situations.
- Based on the epidemiological assessment of the Infested Zone, the TAHC Executive Director finds that sufficient evidence exists to demonstrate that the areas identified for release satisfy the criteria for release from quarantine and movement restrictions. The TAHC Executive Director further finds that the surveillance conducted following implementation of control and eradication

measures has satisfied the criteria necessary for release of the affected area and the movement restrictions.

September 4

- On September 4, 2026, infested zone 06 was modified. The Executive Director Order releases the portions of Kimble County previously included within Infested Zone 06 from quarantine and movement restrictions. The Executive Director Order further modifies Infested Zone 06 to release portions of Schleicher and Sutton Counties and redesignates the remaining affected portions of Schleicher and Sutton Counties as Infested Zone 06.A.

September 3

- On September 3, 2026, infested zone 01.B including areas of Uvalde and Zavala counties are released from the quarantine and movement restrictions.
- On September 3, 2026, infested zone 05 including areas of Coke and Tom Green counties are released from the quarantine and movement restrictions.

The situation is evolving, and new information will be provided as investigations continue.

Executive Director Orders identifying Infested Zones remain in effect, pursuant to Texas Agriculture Code, Chapters 161 – 168, and applicable regulations found in Title 4 of the Texas Administrative Code, Part 2, Chapters 31-60. This order remains in effect until the quarantine is released by the Commission.

Texas Parks and Wildlife Department (TPWD):

To protect the State's natural resources, including fish and wildlife, through land-based marine patrol, TPWD will serve as a force multiplier responding to requests for support from our federal, state, and local partners to prevent, detect, control, or eradicate parasitic disease outbreaks. TPWD will deploy coordinated resources to prevent, detect, control, and eradicate parasitic disease within the Texas-Mexico Border region.

TPWD staff will continue to coordinate native wildlife surveillance efforts, which will include:

- Working with landowners to organize active wildlife surveillance on their properties
- Inspection of hunter-harvested carcasses when necessary, including animals harvested in State Parks and Wildlife Management Areas.
- Inspection of recently road-killed wildlife.
- Inspection of animals is handled as part of routine wildlife handling, whether that is by agencies, researchers, or other entities that encounter wildlife regularly.
- Reporting from wildlife rehabbers, private practice vets, law enforcement, taxidermists, game processors, and the public.

September 5

- TPWD staff have investigated 7,901 animals statewide. Staff determined 55 of those to be animals of interest.

September 4

- To date, TPWD staff have contacted 7,698 TPWD cooperators and permit holders to notify them of the NWS situation and promote surveillance. 1,467 of those contacts are landowners and permit holders currently within IZs or SZs.
- TPWD staff are monitoring 473 game cameras on 38 WMAs. Of those WMAs located in an IZ, Elephant Mountain WMA is monitoring 29 game cameras. Of those WMAs located in a SZ, Black Gap WMA is monitoring 14 game cameras.
- Since NWS was detected in Texas, TPWD staff have presented on NWS at 68 workshops totaling approximately 6,794 attendees.
- WL Division currently has 158 staff that have completed the AgriLife NWS training.

September 3

- TPWD staff have secured an accumulated total of 394 locations for NWS traps and 22 locations for GRC's for the USDA and TAHC.
- TPWD staff are monitoring 510 game cameras on 38 WMAs. Of those WMAs located in an IZ, Elephant Mountain WMA is monitoring 29 game cameras.

Texas A&M AgriLife Extension Service (AgriLife):

Currently, the AgriLife Extension SOC liaison, Public Information Officer (PIO), Disaster Assessment and Recovery (DAR) Team Members, DAR Administration, Extension Administration, and County Extension Agents are monitoring NWS movement and conditions, SOC response activity, and participating in weekly communication calls with Extension Administration, Entomologists, and Livestock Specialists. Disaster Assessment and Recovery Specialists are on standby to support County Extension Agents and ESF-11 partners with public education, animal response, and recovery efforts as requested. PIO continues to develop educational and outreach materials for publication and continues to participate in daily Joint Information Center activities.

Since June 2025, leading up to the first confirmed NWS case in Texas, AgriLife has:

- Conducted educational programs on NWS reaching over 21,200 participants.
- Established an 18-member working group of Extension Specialists across livestock, wildlife, and human disciplines focused on the development of educational information, outreach techniques, and resources for use by County Extension Agents and other appropriate Extension personnel across Texas.

- Developed a County Extension NWS Educational Toolkit, complete with videos and PowerPoint Slide Decks for use in local producer and community educational outreach efforts.
- Through a grant from USDA-APHIS, Texas A&M AgriLife Extension has distributed 1,000 NWS larva collection kits among the Southern and Western County Extension offices for use in NWS detection and identification.
- Provided expertise with local and state government representatives to better inform their preparation should an incident occur.
- Texas A&M AgriLife Extension livestock entomology specialist conducted an NWS awareness training during the monthly meeting of the Extension Disaster Education Network (EDEN) Agricultural Committee, as well as more in-depth training during the May 2026 EDEN webinar hosted by the EDEN professional development committee.
- As of July 13, 2026, the following online printable resources are now available through the AgriLife Extension New World Screwworm hub:
 - The AgriLife Extension pocket guide is available as a printable resource on the AgriLife website. The pocket guide provides basic information about New World screwworm, available treatment options, and general resources for Texans.
 - A Field Guide for Beef Cattle Producers provides early detection information, reporting, sample collection, submission, and treatment information. This resource is also available on the AgriLife Extension NWS hub.
- Texas A&M AgriLife Research has completed its study evaluating ivermectin-medicated feed products for white-tailed deer as a potential New World screwworm control measure. Data was submitted to the FDA on July 31, 2026, and is under review. The next trial will test doramectin, the active ingredient in Dectomax, in the medicated feed and is expected to begin in the coming weeks.

September 5

- The New World Screwworm Preparedness and Response Education Course for Livestock Inspection remains available on the AgriLife Learn website. As of 8:30 a.m. on [September 5](#), 6,577 individuals had enrolled, with [3,354](#) completing the modules and earning completion certificates.

Texas Department of State Health Services (DSHS):

DSHS State Medical Operations Center (SMOC) is at Increased Readiness in support of this incident. DSHS continues working with state partners and lead agencies to ensure ESF-8's ongoing support.

DSHS is prepared to support, as needed, to assist in protecting the Texas livestock

industry and wildlife. DSHS is ready to respond to human cases, should that occur.

September 4 – Ongoing Coordination

- Center for Health Emergency Preparedness and Response (CHEPR)
 - Due to the lifting of infestation zones in Tom Green County, the 2 inspectors in San Angelo have been released from duty and will be returning to their home duty stations in DSHS.
 - DSHS currently has 3 animal health inspectors deployed to support ongoing response activities in the field.
- Public Health Region 1 Northwest Region
 - On September 3, PHR 1 emailed internal staff, local public health jurisdictions, animal control officers, veterinarians, and other partner agencies and public health officials regarding TAHC release of first eligible NWS infested zones.
- Public Health Region 6/5S Southeast Region
 - On September 3, PHR 6/5S regional veterinarian and a program specialist participated in a NWS tabletop hosted by Harris County Public Health and offered guidance and subject matter expertise on the NWS response.

DSHS staff across regional offices continue reaching out to partners to ensure animal control officers, veterinarians, local health departments, county judges, tribal nations, and other regional partners have the latest guidance and resources for identification, sampling, and reporting NWS.

Texas A&M Veterinary Medical Diagnostic Laboratory (TVMDL):

The Texas A&M Veterinary Medical Diagnostic Laboratory (TVMDL) has deployed one laboratory professional to the Texas Animal Health Commission's (TAHC) Pleasanton office to join the United States Department of Agriculture mobile detection unit deployed from USDA's National Veterinary Services Laboratory (NVSL). The lab is now operational and accepting samples for identification. A second professional remains stationed in the State Operations Center (SOC) in Austin.

TVMDL is educating clients to contact TAHC for triage of a suspected fly or larvae instead of direct submission to TVMDL, however, TVMDL Client Services staff review every daily submission and flag any cases submitted for fly/larvae ID. Laboratorians who have passed the USDA proficiency test for NWS identification stand ready to review submissions and will immediately contact TAHC and USDA should a suspect case be identified. Suspect samples will be routed as directed by TAHC and USDA.

Laboratory personnel at all four agency locations are on standby to support ESF-11 partners as needed.

TVMDL veterinarians are assisting the Texas A&M AgriLife Extension Service in producing screwworm collection kits.

TVMDL is working to validate high-throughput testing, should the need arise.

September 5

- TVMDL received 3 submissions from USDA traps and 0 submissions from private citizens on September 4, 2026. In total, 3 submissions were received by TVMDL College Station on September 4, 2026.
- One submission was reviewed with the assistance of TVMDL personnel at the NVSL mobile lab on September 3, 2026.

Texas Department of Agriculture (TDA):

The Texas Department of Agriculture continues to conduct surveillance, gather intelligence, collect evidence, and monitor any signs of the New World Screwworm fly in relevant portions of the state. Traps specific for the New World Screwworm have been deployed and are continually monitored, with all suspect samples sent to our state and federal partners for identification of suspect fly species.

Texas Commission on Environmental Quality (TCEQ):

TCEQ continues to closely monitor the NWS response and will coordinate with state and federal partners to provide technical assistance and guidance on carcass disposal.

Texas Department of Transportation (TxDOT):

TxDOT continues to support the State Operations Center through daily coordination and situational awareness activities. The department is coordinating with TAHC on compliance checkpoint locations as the New World Screwworm response expands, providing affected districts with operational updates. TxDOT Emergency Management personnel also distribute daily response information and educational materials statewide to maintain awareness and support coordinated operations.

Texas Military Department (TMD):

The Texas Military Department (TMD) is supporting state agency partners in response with a SOC support team.

Texas A&M Veterinary Emergency Team (VET):

On June 18, VET returned from an assigned status in the field to an available status from home stations and remains available on an as-needed basis.

STATE RESOURCES COMMITTED

Agency	Resource Kind and Type	Personnel	Equipment	Status	Location
TDEM	SOC Support	13	0	Activated	SOC
AgriLife	SOC Liaison	2	2	Assigned	Austin
AgriLife	Administration	3	3	Activated	College Station

FINAL COMMENTS: The State Operations Center (SOC) is currently operating at Level II (Escalated Response Conditions). The Texas Division of Emergency Management (TDEM) continues to monitor the situation and will provide additional situation reports as needed.

The four levels of SOC activation are:

- Level I (Emergency Conditions)
- Level II (Escalated Response Conditions)
- Level III (Increased Readiness Conditions)
- Level IV (Normal Conditions)

*This Situation Report can be found on the TDEM webpage at:
